What is Nucleocell®?

Nucleocell® is an important nutritional supplement. Its natural ingredients help the human body to maintain optimal health, even in times of higher infection risks. It supports the synthesis of proteins in the body and are involved in the transport of energy throughout it.

Components are found in Nucleocell®

The most important components found in Nucleocell® are called nucleotides. Nucleotides are important building blocks for cells and the reproduction of new cells. Therefore it is vital for the body and the immune system to work at its best. The nucleotides in Nucleocell® are isolated from yeast and corresponds best to that which the body obtains from food. Nucleocell® is a completely natural product. Nucleocell® also contains additional amino acids and important vitamins.

How does Nucleocell® work?

In some cases, the body cannot produce nucleotides in sufficient quantities. By supplementing with Nucleocell®, the body can be supported effectively. If the body is attacked by an infection or disease, the immune system produces defence cells as quickly as possible. The body can only produce these cells sufficiently if enough nucleotides are available in the body. Taking additional nucleotides allows the immune system to react quickly and efficiently against viral- and bacterial infections as well as diseases.

Below we see the average nucleotides found in our daily food:

Are there other advantages for using Nucleocell®?

By strengthening the immune system, the nucleotides in Nucleocell® improve the body's overall resistance to viral-, bacterial infections as well as diseases. Therefore our health improves and disease outbreaks become less frequent.

Cell regeneration is needed inside (*such as the immune system*) the body as well as externally (*such as wounds and injury*). During the healing process, cells require the

production of new cells, the nucleotides accelerate this healing process. It also reduces the incidence of infections from abrasions, wounds and injuries.

In the intestinal system, the cell renewal process is particularly important and the need for nucleotides are very high. Only when sufficient nucleotides are available - can the intestine work successfully and efficiently to extract valuable nutrients, vitamins and minerals from food. These vital substances are highly important for organs as well as tissues and contribute significantly to the health of our bodies. By supporting the digestive system, Nucleocell® contributes significantly to our overall body health.

Nucleotides also accelerate the production of red blood cells and haemoglobin (*the red ferrous protein in the blood*). This allows the blood to transport more oxygen throughout the body. The additional oxygen has a positive effect on the brain, organs, muscles and tissue. During physical activity and training, nucleotides assist for less acid to be produced, in turn the increased oxygen content in the blood will assist energy to be better utilised and promote performance and lead to enhanced endurance.

How does Nucleocell® influence metabolic functions?

The liver is one of the most complex organs in the body. It is responsible for over 500 functions that are key for good health. These include the production of bile (*the release of glucose, proteins, vitamins, fats*) and other important components into the blood. The liver also detoxifies the body from various substances such as alcohol, nicotine and any other toxins.

The nucleotides support the production of proteins in the liver at the expense of fats - therefor less fat is produced. Thus, by taking an additional nucleotide supplement, muscle growth can be promoted, and at the same time the formation of fat cells are reduced. This results in a slimmer body shape that will overall improve your health and well-being.

Are there any side effects?

Numerous studies on humans and animals have shown that Nucleocell® is absolutely safe as a daily supplement. It is made from normal yeast cells and provides a portion of important supplements that are naturally produced by the body. Any substances that are not needed at the time by the body are excreted. No side effects are known.

How should Nucleocell® be taken?

Studies have shown that the desired results are achieved when taking 2 to 3 capsules per day as a food supplement. It takes at least two to three weeks before the full effect of Nucleocell® becomes visible.

If there is a higher risk of infection, the dose should be increased to 4 - 5 capsules per day.

People with elevated uric acid levels or gout are advised to drink six to eight glasses of water a day and limit the consumption of alcoholic beverages.

When not to use Nucleocell®

Nucleocell® must not be taken in cases of auto-immune disease, after an organ transplant or when the immune system is being weakened by medication due to viral-, bacterial infections as well as diseases.

Where to purchase Nucleocell®

Nucleocell® can be ordered via the PKN AG website
or through your therapist.
